

Email Archive System

**Manage your Emails
Easily and Safely**

Overview

You have an information management system, and you want it to be tightly integrated with your organization's e-mail system. At no additional cost, LibertyNET provides you with a rich set of tools to bring e-mail into the system with full-text and intelligent indexing, perform additional operations via business rules and, when the time is right, automatically move it from your production environment to a LibertyNET Archive Server for long-term storage.

Benefits

Manage Email Automatically

Managing ever-growing emails could be a hassle. With LibertyNET Email Archive System, emails can be imported into LibertyNET in batch, then indexed and archived for later retrieval. Business rules can be set up and processed automatically.

Access E-Mail from within LibertyNET

No need to switch to Outlook or Lotus Notes; your email can be read and stored in your LibertyNET application. When sending mail, you can still use the familiar composition window of your favorite mail program, only now with LibertyNET your email is full text searchable and safely archived.

Find What You're Looking for—In Record Time

All imported mail can be full-text indexed. Replete with Boolean and fuzzy logic, stemming searches and other useful features, LibertyNET's full-text engine gives you the power to find exactly what you're looking for.

Secondary Backup

Even if your mail server crashes and the backups fail, LibertyNET mail features provide you a secondary backup by storing e-mail on the LibertyNET Archive Server.

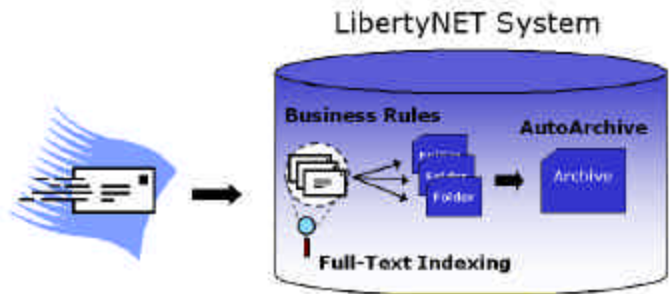

Features

Support for MAPI, VIM, and SMTP/POP Mail Protocols

Be assured that your mail system will easily integrate with LibertyNET; we support the most popular mail protocols.

Automatic E-Mail Archiving with Auto Archive

Auto Archive automatically moves your imported email onto the LibertyNET Archive Server where it can be stored on-line or off-line. This provides an extra layer of security; should your network mail server crash and lose data, all e-mail is stored within the LibertyNET system.

Full-Text Indexing

E-mail messages can be full-text indexed, wherein each word in a message is added to a searchable database, complemented by a powerful array of fast search features.

Rules-Based, Intelligent Indexing

Once e-mail has been imported, messages can be automatically processed by business rules. With LibertyNET Rule Templates (our business rules feature), you can automate your organization's e-mail processes with a myriad of options. Index, move, route, secure, delete, or extract text from messages, all according to your designs.

Data Mining

Use LibertyNET's Data Extraction Engine to mine important data out of e-mail. The extracted data can be used with unparalleled flexibility.

Summary

You should expect an information management system to send and receive e-mail. LibertyNET goes far beyond this basic requirement with an array of features designed to streamline your mail processes, and keep your mail safe and organized. Import it, make it full-text searchable, process it with business rules, and use Auto Archive to store your mail long-term. LibertyNET's complete e-mail solution is available right out of the box.
