

Country Club Printing

Overview

So what is Country Club Printing anyway? This is a feature that allows the printing of multiple images or zones onto a single page. This can be accomplished by setting up a Printer Setup object with multiple print zones, so that these defined zones from different pages can be scaled and fitted in one full page. This is also known as N-Up printing.

With LibertyNET's Country Club printing features, you can group and print your documents the way *you* want to print them. Include the document indices, omit the annotations, add your organization's watermark. Round up your documents with the LibertyNET Packager, which is a method of grouping multiple documents together and printing them 2-up. Do it all automatically with Rule Templates. However you want to print, LibertyNET's Country Club printing features will get you there.

Benefits

Save Paper

Print multiple pages on a single page. Half sheet invoices? Print them 2-up and reduce your paper usage by half!

Figure 1. Multiple documents are output into a single page with 2-up printing

Custom Printing

You decide which sections of a document will be printed, and how printed pages will be formatted.

Integration

LibertyNET's printing features are closely tied to, and enhanced by other LibertyNET features. The Packager locates "related" documents, resulting in a list of documents that can be processed by a Rule Template that handles printing. LibertyNET's powerful array of features allows your custom printing processes to be fully automated.

Features

N-Up Printing

Not only can you print multiple pages onto a single page, you can specify the exact locations that documents should appear on a page. It doesn't get more custom than this.

Figure 2. Mixed batch of zones from different documents are output into a single page with custom printing.

Printer Setup Object

LibertyNET's Printer Setup object is used to store print options. It allows full control over the document areas that will be printed, such as annotations, Page Tags, Bates Numbers—even the actual document text. You can print your organization's watermark. The Printer Setup object is also used to define zones, used in NUp printing. Create Printer Setup objects for each of your printing applications, and deliver the goods just the way you need to.

Summary

Do you have an absolutely wild printing scenario? LibertyNET can handle it easily. Regardless of your printing demands, you'll be confident in the power and flexibility of LibertyNET's printing capabilities. Just ask yourself the question, "How do I want to print today?" Look no further then. LibertyNET has the answer for you.
